Ask questions about co-op reports, company advice, interview tips, and student experiences.

Ask a question:

Which co-op roles mention Python, SQL, or Power BI?

Number of sources to use

6

AI Answer

The co-op roles that mention Python, SQL, or Power BI are:

1. **Data Analyst Intern at Geotab (Source 1)**
 - Used **SQL** to develop interactive dashboards.
 - Used **Python** scripting to migrate Directed Acyclic Graphs (DAGs).
2. **Full-Stack Software Developer and IT Support at Operto (Source 4)**
 - Programmed in **Python** and **SQL** to improve data processing workflows.

No co-op roles mentioning Power BI were found in the provided context.

drive internal efficiencies, promote data literacy, and support system performance analysis.

Co-op Work Activities: During my co-op term, I joined the Data Enablement team, specializing in data visualization initiatives. I had the opportunity to independently lead projects where I developed interactive dashboards using SQL and Superset. These dashboards provided critical insights into team productivity and helped inform strategic decisions across departments. Another technical component of my role involved migrating Directed Acyclic Graphs (DAGs). I utilized GitLab pipelines and Python scripting to modernize and standardize DAGs, ensuring they aligned with best practices. This not only improved the maintainability and scalability of workflows but also broadened my understanding

ny other companies and industries. There are several employees on the team who work on multiple of these projects. For clarification, the company is comprised of around 25-30 employees which includes a diverse set of roles such as software developers, ux/ui designers, business analysts, and development operators (dev ops). Co-op Work Activities: During my co-op term, I worked on the back-end team at Careflow Technologies, a health tech subsidiary of Excelar. My team was comprised of the lead back-end developer, a part-time student, and myself. This opportunity allowed me to develop a wide range of both technical and soft skills, as I contributed to various high-impact projects. My primary responsibility was to help develop and maintain a clinical data pipeline, where I created scalable API

role is involved with Unity Access (UA), a role-based access system that is used by clients such as the University of Tennessee, Domino's, and Alabama Power. Simply put, this software allows administrators complete control of who has access to buildings, which rooms these people have access to, and when these people have access to them. The structure of the developer teams that work on UA are broken up into Enterprise/scale, UI Evolution, Core, Support (Non-UA Devs), Krakow (team in Poland),

Tools/Automation Team, and Arch & Req & Leadership. The atmosphere of my team (Tool/Automation) is friendly and fairly laid back, with an appropriate push to get your work done that naturally comes with working in two week sprints. My co-workers are happy to lend a hand or explain things to me

eSQL. These technologies not only expanded my technical expertise in areas like database management, API design, and containerization, but they also reinforced my understanding of building scalable, secure, and efficient backend systems. I learned how backend systems need to align with business objectives, especially in a healthcare setting where data integrity and security are paramount. Through my experience, I gained a deeper understanding of how technical solutions drive business success. Working in a health-tech environment, I saw firsthand how innovative technologies can improve patient outcomes and operational efficiency in complex industries like healthcare. This role gave me the chance to develop practical, real-world skills while contributing to projects that have a meaningful im

ough CarePro, a new service being built on top of the Knox platform. Samsung operates across many different teams and departments, each with their own area of focus, from software development and product management to design, QA and beyond. The work environment is highly collaborative and structured, each role plays a key part in the development process and cross-functional communication is essential to ensure project success. The atmosphere is professional but supportive, with team members open to answering questions and helping especially co-op students learn and grow. Additionally, having many co- op students makes the environment feel more welcoming and friendly. There is a strong onboarding process, along with opportunities like team lunches, which help everyone connect and b
